NRG PLATFORM · PHASE 1

Decisions for Jade

Everything on the platform that is waiting on your call — content approvals, teaching policy and product choices — with the options, what we recommend, and room for your answer.

22 October 2026 · Prepared by Dr. Ian A. Forde II · 31 items

How to use this

1. Each item has tick boxes. Tick one option (or write your own on the notes line).
2. Our recommendation is a suggestion, not the default — every item is yours to decide.
3. Items marked Review are reading or checking rather than choosing; those marked With Ian we'll settle together.
4. Send it back marked up, or answer by number in a message (for example "D1: C, D7: teachers only"). Anything you're unsure of, we can talk through.

Items D1–D8 are new this week. The page after this one lists all 31 on one page.

All decisions at a glance

Tick the box once an item is settled.

	#	Decision	Type
A. New this week: student questions and what students see			
☐	D1	How student questions are graded: instant (paid) or queued (subscription)	Choice
☐	D2	What an AI "pass" means	Choice
☐	D3	Is the student's rationale optional (+5) or required?	Choice
☐	D4	Which scoring weights in your template are right	Choice
☐	D5	The "one question every 24 hours" rule	Choice
☐	D6	Required questions after practice and after a topic review	Choice
☐	D7	The question-writers' leaderboard	Choice
☐	D8	What students see of their own analytics	Choice
B. Topic reviews			
☐	D9	Read and publish the 15 topic reviews	Review · with Ian
☐	D10	Minimum reading time before a review pays 30 XP	Choice
☐	D11	Glucose in mmol/L in the Endocrine review, and two deck fixes	Review
C. Question bank content			
☐	D12	The 377 rewritten AI questions, 71 changed keys, 177 retirements	Review
☐	D13	461 suggested edits to your own questions (and 55 flags)	Review
☐	D14	AI questions that look miskeyed or contradict each other	Review
☐	D15	Six live questions switched off pending your answer key	Review
☐	D16	Three live questions with glucose in mmol/L	Review
☐	D17	Spot-check the duplicate clean-up	Review
☐	D18	The 269 held-back questions with copyright concerns	Choice · with Ian
D. Question format policy			
☐	D19	I / II / III combination questions	Choice
☐	D20	Numeric dose-calculation questions	Choice
☐	D21	Your two review notes: "regional practice" and "taxonomy not difficulty"	Choice
E. Case studies			
☐	D22	Validate the six pilot case studies	Review
☐	D23	Reference ranges in cases: keep the panel or remove it	Choice
☐	D24	Prohibited stem verbs, case domain weights, lithium example fixes	Review
F. Ranking and practice settings			
☐	D25	Four ranking values still marked "proposed"	Choice

☐	**D26**	Promotion quiz: same pool at every level, or harder as students rise	Choice
☐	**D27**	Rank names: Benner (Novice to Expert) or Bronze to Diamond	Choice
☐	**D28**	Mock exams to your v2 rules (always 100 questions, 2.5 hours…)	Choice
G. Plans, payments and accounts			
☐	**D29**	Free plan limits	Choice
☐	**D30**	Subscriptions: payout, payment processor and prices	Choice · with Ian
☐	**D31**	Sign-in security and the school/university field	Choice · with Ian

A. New this week: student questions and what students see

Your Template 3 is now built on the test site. A student gets an assignment the platform picks (topic, domain, taxonomy level, stem length), writes the stem, four options and an optional rationale, and an AI grader scores it — Stem /30, Options /45, fit to the assignment /25, rationale bonus up to +5, 75 to pass — with warm, specific feedback on each bar. These choices decide how it runs.

D1 How should student questions be graded?

Both ways are built and use the same rubric and feedback. The difference is cost and speed.

- ☐ **Instant, through the paid AI service.** Feedback within a minute of submitting. Costs roughly 3–5 US cents per question (about US$30–50 per 1,000 questions). Needs an API account with a card on file.
- ☐ **Queued, on the AI subscriptions we already pay for.** No cost per question. Questions wait in a queue and are graded in batches when Ian (or an assistant) runs the grader — typically the same day. Students see "waiting for grading" until then.
- ☐ **Start queued, switch to instant** once paying students make same-minute feedback worth the cost. Switching is one setting; nothing else changes.
- ☐ **No AI grading** — teachers review student questions as before.

Our recommendation: option 3. If the instant service is ever down, questions fall back to the queue automatically, so none goes ungraded.

Notes:

D2 What does an AI "pass" mean?

Your template says a question scoring 75+ "enters the student question bank". Today a teacher still approves every question before students can see it, and XP is paid on that approval.

- ☐ **The grade is advice.** A teacher approves every question; the AI grade and feedback sit beside it on the review page.
- ☐ **A pass goes straight into a separate "student questions" bank** that students can practise from, labelled as student-written; teachers spot-check later.

Our recommendation: advice only for now. The grader is good, but a wrong answer key reaching students costs more trust than a teacher's minute. The grader never passes a question whose key it believes is wrong.

Notes:

D3 Should the rationale be optional or required?

Your template makes it optional (+5 bonus). Before this week the form required it, because an approved question needs an explanation for students.

- ☐ **Optional, +5 bonus** (your template; how it works now). Teachers write or ask for one before approving.
- ☐ **Required** for every submission (the bonus still rewards a strong one).

Notes:

D4 Which scoring weights are right?

Template 3 gives two versions: section 3.3 says Stem 20% and Options 40%; section 3.5 gives Stem 30, Options 45 and Alignment 25 points. We used 3.5 because its bands are detailed.

- ☐ **Keep 30 / 45 / 25** (section 3.5, as built).
- ☐ **Use different weights: _____**

Notes:

D5 The "one question every 24 hours" rule

Your prototype required students to write a question every 24 hours to keep access. It is built and switched off. When on, a student who hasn't written one in 24 hours (after their first day) is asked to write one before practice or a new mock exam opens.

- ☐ **Off.**
- ☐ **On, as a reminder only** — a banner, nothing blocked.
- ☐ **On, enforced** — practice and new mock exams wait until today's question is written.

Our recommendation: start with the reminder for a few weeks and watch whether students write; enforce later if they don't. Blocking study the night before an exam can push students away.

Notes:

D6 Required questions after practice and after a topic review

Your Methods 2 and 3: after a practice session the student writes a question on the topic they found hardest; after a topic review, a question on that topic. Both are built as an optional "write a question" button at the end.

- ☐ **Optional button** (as built).
- ☐ **Required** before the next session or review.
- ☐ **Required after topic reviews only.**

Notes:

D7 The question-writers' leaderboard

Built to your Template 3.8 (10 points per approved question, 15 for an AI score of 90+, +5 for an excellent rationale, streak bonuses for 3 and 5 in a row). You asked earlier for students to see only their own rank, so it is switched off.

- ☐ **Off.**
- ☐ **Teachers only.**
- ☐ **Students too.** Students who hide their badges from classmates appear as "A student".

Our recommendation: teachers only to begin with; it shows who is engaging without public comparison.

Notes:

D8 What should students see of their own analytics?

Your Template 5 describes a full analytics dashboard. Earlier you asked that students see only their rank. The platform now records every answer, so a dashboard can be built either way. Teachers see the cohort's analytics in every option.

- ☐ **Rank only** (today).
- ☐ **Rank plus their own private analytics:** strengths and weaknesses by domain and taxonomy, their weakest topics with links to the matching topic review and practice, and exam stamina — never compared with classmates.
- ☐ **Full Template 5,** including comparison with the class average.

Our recommendation: option 2. It turns a mistake into a next step without the pressure of comparison.

Notes:

B. Topic reviews

Your 15 slide decks are now readable reviews on the test site, laid out for phones, each with its practice question, a "practise questions on this topic" button and related reviews. Questions on a reviewed topic link to it after the student answers. All 15 are drafts until published.

D9 Read and publish the 15 reviews Review With Ian

As a teacher: Study → Topic reviews → open each → "Publish for students". The import kept every word of your slides; please check the layout reads well and nothing is out of order.

Published so far:

D10 When does reading a review earn its 30 XP?

Your XP spec pays 30 XP for reading a review. It counts once a student reaches the end of a review and at least a minimum time has passed since they opened it, so scrolling straight to the bottom doesn't pay.

- ☐ **3 minutes** (proposed; set now).
- ☐ **5 minutes.**
- ☐ **Another time: _____**

Notes:

D11 Three fixes in the decks Review

- ☐ **Endocrine:** fasting glucose reads "70–100 mg/dL (3.9–5.6 mmol/L)". The platform rule is mg/dL only — remove the mmol/L?
- ☐ **Heart Failure, Signs and Symptoms:** the third column's heading repeats its first bullet ("Acute pulmonary edema: pink frothy sputum..."). What should the heading be (e.g. "Life-threatening")?
- ☐ **Hypertension:** the practice question has no "why the other options are wrong" (the other 14 do). Add one?

Notes:

C. Question bank content

These are reading and checking jobs. Nothing below reaches students until you approve it. Each has a checklist on the test site's review queue or a document Ian can send.

D12 The 377 rewritten AI questions Review

The fix pass rewrote 377 questions to your item-writing standard and retired 177. In 71 of the rewrites the correct answer changed, so those need a clinician's eye first. Checklist: *FIX_JADE_CHECKLIST*.

Progress:

D13 Suggested edits to your own questions Review

A careful pass over your 516 questions proposed 461 small revisions and flagged 55 (31 possible key problems, 14 needing your judgement, 4 scope, 4 duplicates, 3 negative stems). None has been applied — they are your questions.

Notes:

D14 AI questions that look miskeyed or contradict each other Review

One block of AI questions (spec1586–1605) looks systematically miskeyed; 9 are still waiting: 1586, 1591, 1593, 1594, 1597, 1600, 1602, 1603, 1604. Separately, some AI questions give opposite answers to the same situation: boggy fundus, croup, catheter infection, Trinidad and Tobago 6-week vaccines, and replies to suicide risk (one conflicts with your question q41 in the "new 100" set).

Notes:

D15 Six live questions switched off Review

On 5 October six of your soft-launch mock questions were found keyed to a wrong option (five of them unsafe) and switched off on the live site: q35, q50, q66, q70, q71 and q75. The right answer is one of each question's existing options. Confirm the keys and they go back on.

Keys:

D16 Three live questions with glucose in mmol/L Review

The platform rule is mg/dL. Three of your live questions use mmol/L: "new 100" q1 and q10, and "restart master 15" q2. Convert them (we can draft the conversion for you to approve)?

- ☐ **Yes, draft the conversions for me to approve.**
- ☐ **I'll edit them myself.**

Notes:

D17 Spot-check the duplicate clean-up Review

610 AI questions that duplicated another question (or one of yours) were retired, keeping your original wherever there was one. A random check found every one a true duplicate; a look at five or ten in the review queue (filter "rejected", note "dedup") would confirm it.

Notes:

D18 The 269 held-back questions With Ian

In the prototype bank, 145 questions are marked "paraphrased from Saunders" and 124 are word-for-word classic NCLEX items without rationales. They have never been shown to anyone.

- ☐ **Drop them.**
- ☐ **Rewrite them** into original questions on the same topics.
- ☐ **Keep them** (only with permission from the publishers).

Our recommendation: drop them. The bank has plenty of original material on the same topics.

Notes:

D. Question format policy

D19 I / II / III combination questions

The CXC RENR sample test uses "Which of the following: I, II, III — A. I and II only...". About 15 bank items use the format and are flagged; some appear in promotion quizzes on the test site.

- ☐ **Allow them**, as the RENR does (a small share of the bank).
- ☐ **Convert them** to single-best-answer questions.
- ☐ **Retire them.**

Our recommendation: allow a small share, so students meet the format before the real exam.

Notes:

D20 Numeric dose-calculation questions

Some questions ask for a calculated dose. They are flagged and held until you decide.

- ☐ **Allow them** (the case-study player already has a calculator; practice could get one too).
- ☐ **Exclude them** — the RENR doesn't test arithmetic this way.

Notes:

D21 Your two review notes

From your early reviews: *"regionally accepted practices rather than Trinidad and Tobago"* and *"questions should be in a taxonomy rather than a difficulty"*. Both change how future questions are written and tagged.

- ☐ **Regional practice:** write to practice accepted across CARICOM, naming a country only when the question is about that country's system (e.g. a T&T immunisation schedule). Or: _____
- ☐ **Taxonomy:** tag every question by RENR level (Knowledge/Comprehension, Application, Analysis) and stop using easy/medium/hard. Or keep both.

Notes:

E. Case studies

D22 Validate the six pilot cases Review

Your lithium case and five AI-written cases are on the test site in the teacher's case-study review, each with a short list of what to confirm clinically. Once validated they can be published.

Validated:

D23 Reference ranges in cases

The case player has a panel of normal lab ranges. Addendum #2 of your case request says not to give ranges; section 5.3 of your V3 standard includes them.

- ☐ **Keep the panel.**
- ☐ **Remove it** (students must know normal values, as in the exam).

Notes:

D24 Three gaps in the case standard Review

- ☐ **Prohibited stem verbs:** section 7.6 refers to a list shown only as an image we couldn't read. Could you send the list?
- ☐ **Domain weights for the case bank:** the same RENR blueprint as the question bank, or different?
- ☐ **Lithium example:** Q4 and Q5 share the same key, Q6 evaluates an intervention the case never shows, and three distractors are implausible. Revise?

Notes:

F. Ranking and practice settings

D25 Four ranking values still marked "proposed"

- ☐ **Retaking a mock exam you've already sat pays ×0.25 XP** (same as a repeated practice question). Or: _____
- ☐ **Promotion quiz: 5 seconds' grace** on each 90-second question for slow connections. Or: _____
- ☐ **24 hours' wait** before retaking a failed promotion quiz. Or: _____
- ☐ **The quiz leaves out questions the student answered in the last 14 days.** Or: _____

Notes:

D26 Should promotion quizzes get harder?

Today every promotion quiz draws 25 questions from the whole live bank, weighted to the RENR blueprint, for every one of the 24 promotions.

- ☐ **Keep one pool for every level.**
- ☐ **More Analysis-level questions as students rise** (e.g. Expert tier mostly Analysis).
- ☐ **Focus each quiz on the student's weakest topics.**

Notes:

D27 Rank names

The programme brief says Bronze to Diamond; your rank system file uses Benner's Novice to Expert, which is what's built (25 levels, five per tier).

- ☐ **Benner: Novice → Advanced Beginner → Competent Candidate → Proficient Candidate → Expert Candidate** (as built).
- ☐ **Bronze → Silver → Gold → Platinum → Diamond.**

Notes:

D28 Mock exams to your v2 rules

Your Mock Exam Regulator template: always 100 questions in 2.5 hours, domain mix within 2% of the blueprint and taxonomy within 3%, stem lengths 2:1:1:1, no going back, two 5-minute breaks with the clock running. Today teachers build mocks of any length.

- ☐ **All mocks follow the v2 rules.**
- ☐ **Add an "official RENR mock" type that follows them;** teachers can still build shorter practice mocks.
- ☐ **Leave mocks as they are.**

Our recommendation: option 2, so teachers keep short class quizzes.

Notes:

G. Plans, payments and accounts

D29 Free plan limits

Your v2 template is built (switched off until payments exist): 10 practice questions a day, no mock exams, one topic review a day for 5 minutes. Your earlier v1 said 50 questions a day and one mock a week.

- ☐ **v2: 10 a day, no mocks, one 5-minute review a day** (as built).
- ☐ **v1: 50 a day, one mock a week.**
- ☐ **Other:** _____

Notes:

D30 Subscriptions With Ian

Nothing is built until these are known. The build plan is ready.

- ☐ **Where payments go:** your Schwab account (we need to confirm Schwab accepts payouts from the processor) or _____
- ☐ **Payment processor:** WiPay (recurring billing to be confirmed) / PayPal Subscriptions / other _____
- ☐ **Prices:** monthly US$____ · full programme (about 3 months) US$____ · student or school discount? ____
- ☐ **Registered business / tax status** for the merchant account: _____

Notes:

D31 Sign-in security and the school field With Ian

Your Login template asks for two-step sign-in (a code) for premium students, teachers and admins, automatic sign-out after 15 minutes idle, and a required school/university field "for the marketing database".

- ☐ **Two-step sign-in by emailed code** (no SMS provider needed) for premium students, teachers and admins / teachers and admins only / not yet.
- ☐ **15-minute idle sign-out** / 60 minutes / none (shared devices are the reason for it).
- ☐ **School/university field:** required with a clear consent line / optional / leave out.

Our recommendation: emailed codes for teachers and admins first; 60-minute idle sign-out; school field optional with a consent line — collecting it for marketing needs the student's agreement.

Notes:

What happens next

Most of these are a setting or a short change once you've decided, and nothing reaches the live site until it has been tested on the test site first. Send back whatever you've settled — even a handful at a time helps — and Ian will confirm what changed.
